EVERYTHING, service included

Plus, service included

For nearly 50 years, TERIS has followed the philosophy of its founders, Jeannine Bigras and Fernand Corbeil, with an experienced and dedicated team of experts whose mandate is to simplify the process of procuring both your production and retail products. This way, TERIS can fit seamlessly into your day-to-day operations and become your procurement division, simply and transparently.

Logistics, service included

Here's why we invest continuously in our logistics process and technology: our goal is to offer fast service on a national scale, both for small and large growers, whether it's for a small package, a pallet or a truckload.

We use our own fleet of trucks, which have a reliable and predictable weekly delivery schedule. We also use courier and carrier services for your urgent needs.

You can also pick up your orders directly at our Laval and Quebec City stores or the warehouses of our partners, GREENLIFE SOLUTIONS CANADA, located in British Columbia, Manitoba and the Atlantic Provinces.

Inventory, service included

We offer over 15,000 different products — more than 3,000 are in stock throughout the year in our 45,000 square foot warehouses in Laval and Quebec City.

Service included

Whether you're a horticulturist, a farmer, an exterminator, a gardener, a landscaper, a shop or a vineyard, whether your products are hydroponic, field, nursery or greenhouse grown, our team of representatives is available to help you choose the right products for your needs — and always at the best value.

Our commitment: never us without you.

I wish you many excellent seasons to come!

A handwritten signature in blue ink that reads "Stéphane Corbeil". The signature is fluid and cursive, with a large, stylized "S" and "C".

Stéphane Corbeil
President
TERIS

General conditions

PRICING

Pricing is FOB our warehouse and is subject to change without notice.

DELIVERY

TERIS undertakes the shipment of its products in the quickest and most efficient manner at the time of delivery. All orders are shipped complete. The shipment of any back-ordered products will be at the customer's expense.

PESTICIDES

A valid and up-to-date copy of a pesticide permit is required to purchase certain classes of pesticides.

PAYMENT TERMS

The regular term of payment is Net 30 days from the delivery date. To obtain payment terms, the client must fill out a CONFIDENTIAL credit facility form. The credit line limit is subject to approval by TERIS. **Spring payment terms** are available for a certain range of garden products. **Extended payment terms** are available, under certain conditions, for crop input production. **Payment by credit card** is accepted only for the payment of invoices without pre-approved lending limits or for invoices not exceeding 5 days from the date of delivery. A credit card may not be used to pay invoices 5 days beyond the shipping date. The accepted credit cards are VISA and MASTERCARD. Payments by Interac are accepted at our two locations.

CANCELLATIONS

Confirmed orders may not be cancelled without written approval by TERIS.

CLAIMS AND RETURNS

All customer claims, for any reason whatsoever, must be made within 10 days of receipt of the goods. After this date, the goods are presumed having been received in good condition. Before returning any goods, the customer must obtain written authorization from the seller as well as a return authorization number. No returned goods will be accepted without prior authorization by TERIS. A minimum amount of fifteen per cent (15%) of the sold price of the returned goods will be billed to the customer for handling, and the goods must be accompanied by a proof of purchase. Any freight charges for the returned goods are at the customer's expense. The returned goods must be in the original packaging, not have been utilised and without damage. No goods will be accepted after 30 days of date purchased. **Not returnable:** Special orders of goods not kept in inventory, or exceeding the regular inventory of the seller, goods that have been cut or altered, seasonal goods, electrical goods. **Consigned goods:** Must be paid in full and will be credited upon return. The credited amount cannot exceed the invoiced amount of the consigned products.

Manufacturer defect: TERIS' responsibility is limited to the guarantee of the manufacturer. The defective products must be returned for validation of the guarantee. Photographs and explanations may be requested.

These fertilizers are composed mainly of feather meal (feed grade), natural rock phosphate, sulfate of potash, magnesium and basalt rock which are all accepted in organic farming. They contain no manure, no sewage sludge, no fillers. They are fast-acting and long-lasting. They do not burn and are harmless to children and pets. It is recommended however, to read the instructions on the product label.

Natural fertilizers

100% Natural, no manure, no sewage sludge, no fillers.

Agriform® Planting Tablets

AGRIFORM® 20-10-5 Planting tablets plus minors Two-years Planting tablets for Root Zone Feeding of Trees, Shrubs and Ground Covers

This product is intended for all who are planting trees and shrubs. A good start is the key of success for transplantation. By adding adequate fertilizer and mycorrhizae, the recovery will be stronger.

The Agriform® tablets are compressed, which helps to extend the release of soluble nutrients for up to two years. These tablets deliver long-term, leach-resistant nutrients right in the root zone to encourage plant vigor throughout establishment. The available nutrition makes trees less susceptible to disease and other environmental stress factors.

Description	Formula	Duration	Size	Code
Agriform 21 g	20- 10-5	1 to 2 yrs	500/cs	AG20105

Advantages of bromethalin

TOMCAT® is the only retail brand that manufactures bromethalin bait stations which rapidly kills mice (in only 2 days).

Superior to traditional 1st and 2nd generation anticoagulants, which can take up to 14 days to kill a mouse.

Each 28 g block of bromethalin bait can kill up to 12 domestic mice, superior results compared to other active substances.

SYNERGETIC®

Synergetic® lamps offer efficient solutions for flying insect control for both residential and commercial spaces.

Synergetic® bulbs offer 2 luminous spectres and a wider brilliance in order to attract a broader range of insects than traditional blue bulbs and are all energy efficient.

The Halo and Nectar series are equipped with a reservoir to insert a liquid bait of your choice. Of contemporary and discreet styling, Synergetic® lamps harmonize perfectly with any environment.

Texel offers a complete line of fabrics perfectly suited to horticultural production; products designed to reduce your labor costs, minimize losses and maximize your production yields.

ARBO-THERM Polyester felt on which a black LDPE has been applied in order to render it waterproof. Prevents daily temperature fluctuations under winter protection while promoting snow accumulation over crops. Reusable and provides excellent protection against road salt and drying winds.

ARBOTEX Polyester and polypropylene felt onto which a surface finish has been applied. Reflects the sun's rays and diminishes the risk of burns to plants; ensures water run off and is completely washable and reusable.

ARBOTEX Plasticized Polyester felt on which a white LDPE has been applied rendering it waterproof. Provides excellent protection against road salt and drying winds.

SOLTEX Winter protection for residential lawns. Protects against salt, sand, and gravel. Reusable and washable.

REMARKABLY CLEAN GREENHOUSES

If you could protect your greenhouse this way, you wouldn't need any detergents or disinfectants.

VirKon® APPROVED* FOR USE IN GREENHOUSES!

*PCP NUMBER: 24210

These are some of the products eligible for the Vetoquinol Club points program. Sign up today at vetoquinolclub.ca and reap the benefits.

Vetoquinol would like to remind you of the importance of a good integrated pest management protocol.

**NEED MORE INFORMATION?
CONSULT YOUR BIOSECURITY SPECIALIST.**

Protect your crops by cleaning and disinfecting between two productions, in order to reduce the risk of spread of fungal diseases and bacteria. A good habit to prevent major loss.

Virkon.

Request the TERIS annual packs

An effective and ecological solution

RIGID TRAY

Facilitates transport even with a heavy soil

100% OPAQUENESS

Contributes to better root development and improves growth

UNIFORM DRAINAGE

Due to the grooves underneath the annual pack

AERATION HOLES

Maximizes healthy leaf growth and permits the use of a handle

Beware of imitations,
if the TERIS logo is not there,
it's not the real TERIS pack.

UNIQUE

Only the TERIS pack offers quality and uniform annual production in a robust container that is adapted to handling by producers and garden centers.

Plastic
horticultural containers
Dimensions: 9" x 6" x 3" with or without inner divisions

PREFORMA

Preforma plugs are held together through a binder, making the plugs well suited for use in any type of automation solution. Another key benefit of Preforma; cutting rooting time significantly, as plugs will not crumble even when not fully rooted during an automated transplanting process.

Description	Quantity/ case	Code
PREFORMA 3 x 26/strip (3 mixture)	288	CGJJP10326N

CAREFREE 42 mm x 60 mm 50 tray	650	JIC42

NEW — Jiffypot R2

The Jiffy R2 has kept most of the original Jiffypot characteristics, using peat and wood pulp as main ingredients. What is different from the original pot is an added characteristic, keeping the pot dry, even though it is exposed to water or humid substrate.

- Easy to use in automatic dispensing equipment
- Due to maintained rigid form, automatic spacing is possible
- Rigid form makes packing easier
- No nitrogen binding
- No growth of mold or fungus
- No root spiraling due to coarse surface of inner pot
- No need to remove pot when planting
- Sustainable gardening
- 100% biodegradable

For further information, please contact your TERIS representative.

Peat pot

100% biodegradable. Composed of wood and peat fibers. Without glue. OMRI Listed

GROWBAG

BIOGROW *The green revolution in the substrate market*

NATURAL

The substrate Natural is the reference product of our range. A standard with unique environmental properties and made up of materials directly produced in defibring workshops. The raw materials are then sifted to remove fine particles and ensure better root aeration.

Properties : Substrate Natural has excellent water retention, and maintains good drainage and aeration. This is a more vegetative substrate than the other substrates of the range, but it provides a more generative action in winter since it offers suitable aeration.

Finished Product : Fine on the surface and thus offers homogeneous humidity.

DUO

The substrate Duo is an innovative product and the result of biotechnology research. The substrate Duo is completely recyclable and renewable as it is also the case for all Biogrow products. It results from the mixture of 50% of sifted materials produced in defibring workshops (Natural type) and 50% of coco chips derived from complete crushing process of the coconut mesocarp.

Properties : The substrate Duo maintains a well-balanced air/water ratio.

Finished Product : Biogrow manufacturing process of the substrate Duo results in a substrate with a gradual grain texture – finer on the surface and rougher inside.

AIR

The substrate Air is a new generation product. This is a 100% natural, renewable and recyclable product. It is made up of 20% of sifted materials produced in defibring workshops (Natural type) and 80% of coco chips derived from complete crushing process of the coconut mesocarp.

Properties : The substrate Air has high aeration and drainage capacities which require specific irrigation techniques.

Finished Product : The substrate Air results in a substrate with a gradual grain texture – finer on the surface and rougher beneath.

It revolutionized an industry.

Osmocote® was the first controlled release fertilizer. A technology that changed the way plants were fed. An advancement that changed the grower's approach to running a business. And although the original Osmocote technology has evolved over the years to be even more efficient and economical, one thing hasn't changed. More growers every day still rely on the proven performance. And the reason isn't revolutionary at all. Osmocote works.

● The One. ● The Only. ● The Original.

ICL Specialty Fertilizers has continually refined and improved Osmocote® technology to make the delivery of plant nutrition even more efficient and more closely in tune with plant growth.

OSMOCOTE® PLUS is a homogeneous product with N-P-K, magnesium and micronutrients in each coated prill. Designed for nursery and greenhouse production, it is especially useful where performance is a top priority, such as sensitive or high-value crops. It can be incorporated into growing media or surface applied. It is recommended for use when growing a wide variety of crops or in combination with water soluble fertilizer for a steady source of nutrition throughout the season. ICL's Patterned Nutrient Release Technology™ meets specific feeding cycles with unmatched consistency, efficiency and safety.

OSMOCOTE® PRO A blended product with micronutrients that may contain coated, uncoated and/or slow release components with a pre-defined longevity of N-P-K. Osmocote Pro is best used in outdoor applications such as general container nursery production, and can be incorporated or surface applied.

OSMOCOTE® PRO with Fusion Technology™, combines the nutritional benefits of Osmocote Pro with a unique fusing agent that keeps top-dressed fertilizer prills in the pot—a particularly important feature in outdoor nurseries where pots are often blown or knocked over. It is also great for nurseries where stock is laid on its side for overwintering.

OSMOCOTE® CLASSIC Is the original product that started it all more than 50 years ago. A homogeneous product with coated N-P-K in pre-defined longevities, it continues to offer proven, reliable performance for general nursery and greenhouse production. For optimal results, incorporate Osmocote Classic into growing media and combine with Micromax® Micronutrients.

OSMOCOTE® BLOOM With a smaller prill size, Osmocote Bloom provides better uniformity and even distribution of nutrition in smaller containers, optimizing plant utilization. 100% coated N-P-K, with magnesium and essential micronutrients. The low P/high K ratio promotes more compact growth.

NURSERY MIX Nursery Mixes are specially designed for general purpose, outdoor production of nursery stock, foliage and in landscapes. They contain Osmocote coated N-P-K, blended with micronutrients and other nutrient sources that consistently provide your plants with what they need, in a form they can readily utilize. As an added bonus, all of these mixes are affordably priced, which helps to stretch your fertilizer dollars. These formulations can be incorporated or surface applied.

NURSERY MIX with Quickstart®
Quickstart products feature uncoated nutrients for an immediately available starter charge. This is especially useful for quick, green-up applications or to offset the nitrogen draw of green bark.

TOPDRESS SPECIAL with micronutrients
Enhanced with E-Max Release Technology™, IBDU or Poly-S®, these formulations are ideally suited for quick green up applications in container nursery stock. Do not incorporate into the growing media. Not for use in covered production areas or in propagation.

Controlled release fertilizers

Agriform®
Planting Tablets

AGRIFORM® 20-10-5 Planting tablets plus minors

Two-years Planting tablets for Root Zone Feeding of Trees, Shrubs and Ground Covers.

This product is intended for all who are planting trees and shrubs. A good start is the key of success for transplantation. By adding adequate fertilizer and mycorrhizae, the recovery will be stronger.

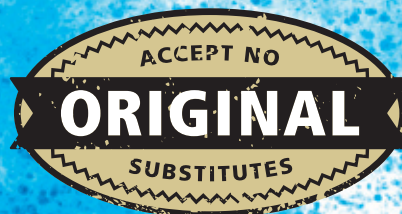

The Agriform® tablets are compressed, which helps to extend the release of soluble nutrients for up to two years. These tablets deliver long-term, leach-resistant nutrients right in the root zone to encourage plant vigor throughout establishment. The available nutrition makes trees less susceptible to disease and other environmental stress factors.

Description	Formula	Duration	Size	Code
Agriform 21 g	20- 10-5	1 to 2 yrs	1000/cs	AG20105

Peters®

THE ONE. THE ONLY. THE ORIGINAL.

1947 The bag may have changed, but the proven performance that more growers trust is still the same. 2015

FACTS ARE FACTS. Only one water soluble fertilizer brand has delivered the nutrition plants need to thrive longer than any other. Only one brand continues to reward growers who believe performance outweighs claims of being just about as good.

Time and nearly a zillion plants have proven there is no substitute.

Consult with your Territory Manager
(who's an original, too) today.

Peters® Professional

Peters® Professional water soluble fertilizers have been the preferred choice of growers for more than 60 years. The product lineup contains a broad range of formulations featuring the highest quality, soluble ingredients and chelated micronutrients available and includes products with the exclusive M-77® micronutrient package. Supported by expert technical consultation, there's a Peters Professional formula for every crop.

Peters® Excel

Peters® Excel: Unique formulations that provide professional growers with the ability to deliver complete plant nutrition using a single concentrate stock tank. This helps decrease labor and overall costs. These formulations also offer more flexibility to supply calcium and magnesium. Additionally, growers have been able to reduce or eliminate the need for additional acid injection to counter high alkalinity in irrigation water. Finally, all Peters Excel products are extremely soluble, which helps to keep emitters clean.

Peters® Excel pHLow®

Peters® Excel pHLow®: Each formulation contains PekAcid, a proprietary raw material invented by ICL. PekAcid is highly soluble, fast-dissolving, and forms phosphoric acid when added to the stock tank. It imparts active acidity properties to ICL's products that reduce water alkalinity at the point of injection, reducing or eliminating the need to use mineral acid. This technology is useful over a wide range of water types and application rates—and along with chelated micronutrients—is effective in promoting healthy plant growth. A safer alternative to conventional liquid acids, Peters Excel pHLow is ideal for water with moderate to high alkalinity. Delivering proper plant nutrition and managing alkalinity are keys to grower success. Peters Excel pHLow is the all-in-one, water soluble solution that helps you do both.

Trust the Innovators of the Highest Quality Water Soluble Fertilizers

Jack's
PROFESSIONAL®

Whatever you are growing and regardless of your water quality, there is a *Jack's Professional* water soluble formula that is a perfect fit for you.

- Innovative formulations designed to increase nutrient efficiency and maintain maximum crop performance
- Effective chelating system resulting in improved plant performance
- Innovative research and fertilizer blending backed by the JR Peters Laboratory

Soluble Fertilisers

Superior quality JACK'S PROFESSIONAL soluble fertilizers

The selection of Jack's Professional fertilizers is the result of 65 years of research. It offers more than 60 formulations of professional quality ultra soluble fertilizers. No matter the water quality, we have the appropriate formulation. To meet your needs, the Jack's Professional line offers four categories of soluble fertilizers which will rapidly increase the quality of your horticultural production.

Jack's FeED

These FeED products are specially formulated for a specific group of crops, but can also be used as tool to bring specific plant nutrition qualities to your fertility program.

- Blend of 3 iron chelates: EDTA, DTPA, and EDDHA
- Macro, secondary, and micronutrients evaluated and designed specifically for each formula to deliver a truly balanced fertility program in one bag

Jack's LX

- All formulations in this enhanced line of fertilizers are fully mixable to tailor customized blends for individual growers and water supplies. The LX system provides a peat-lite micronutrient package that is balanced throughout the product line. This ensures a consistent micronutrient level is supplies when products are tank mixed.

Jack's PRO

JR PETERS features premier grade fertilizers formulated with highest quality components and manufacturing controls.

You will find the following formulas:

- General Purpose Formulas
- Peat-Lite Formulas
- No Phosphate Formulas
- High Phosphate Formulas
- High K Finisher Formulas
- Specialty Crop Formulas
- Orchid Formulas

Chemilizer

- Ideal for poor quality water
- No filter needed
- Not affected by water flow fluctuations

Twist II Clean Filter

- Well water systems
- Agricultural and landscape irrigation
- Misting systems

MobileCart

Mobile Cart models are available for these Hydro product lines.

Hydro Systems' **Mobile Carts** are an easy-to-use, economical way to deliver fertilizers and other treatments. These systems are ideal for spot treatments in garden centers.

Each system is delivered fully assembled. All you need to do is connect it to your water line!

Perfect for:

- Spot treatments
- Pesticides
- Disinfectants
- Fertilizers

NOTHING SAYS GROWING MEDIA BETTER[™]

PROFESSIONAL GROWING MEDIA WITH CUTTING-EDGE TECHNOLOGIES

Introduced in 1968, PRO-MIX has always provided commercial growers with cutting-edge and value-added growing media products. The PRO-MIX growing media are enhanced with high-performance active ingredients and are considered a reference in the market, as they represent innovative and unique solutions. Fine-tuned for growers who seek efficiency, superior plant quality, disease suppression and resistance to environmental stresses, the PRO-MIX growing media optimize results.

HP HIGH POROSITY

With its high perlite content, this fibrous peat moss provides a growing environment which benefits growers looking for significant drainage capacity, increased air porosity and lower water retention.

BX GENERAL PURPOSE

Offers a solution for growers seeking the benefits of added vermiculite for improved nutrients availability and a perlite content providing limited but proper drainage capacities. Combine with high quality fibrous peat moss, this formulation is ideal for growers looking for a general purpose medium which creates a well balance growing environment.

PGX PLUG & GERMINATION

Is formulated with vermiculite to provide added nutrients at the early development stages. This formulation will optimize growth and create a growing environment that is adapted for plugs and germination purposes.

MP ORGANIC GROWING

Provides the perfect solution for growers in need of an organic-certified, growing medium that delivers well balanced air/water qualities. Enriched with MYCORRHIZAE, this product will not only improve the overall growth and increase yields of your crops it will also increase plants' resistance to environmental stresses.

FPX PLUG & GERMINATION

Well adapted for water sensitive crops by providing low water retention levels.

BRK LOW WATER RETENTION

Formulated with an aged pine bark, it is nitrogen stabilized and low water retention.

LP15 MULTI-PURPOSE

This fibrous peat-moss and low perlite formulation is combine to cutting-edge active ingredients (mycorrhizae + biostimulant).

BIOSTIMULANT

Improves overall growth of plants.

MYCORRHIZAE

Improves fertilizer uptake and increases plant's resistance to stresses.

Mixtures that enhance the quality of your crop and reduce production time

OM1 ORGANIC GENERAL PURPOSE

The perlite and vermiculite content improves aeration while regulating moisture and nutrients. The composted peat allows rapid growth of young roots for healthy, uniform crops.

BM1 GENERAL PURPOSE MIX

The perlite and vermiculite content improves aeration while regulating the moisture and nutrients holding capacity necessary for rapid root growth.

BM2 GREENHOUSE SEEDLING PRODUCTIONS IN PLUGS, TRAYS OR FLOATING SYSTEMS

Made of selected particle size components to facilitate cavity filling, uniform germination, and rapid root growth.

BM4 GENERAL PURPOSE MIX, 100% OF ORGANIC FIBER

Made of all-organic fibers, this is the most ecological product line within the BM Series. With its high level of easily available water and its porosity, it provides an optimal root-growing environment.

BM6 PEAT AND PEALITE

The optimal ratio of coarse sphagnum peat moss and perlite allows for a superior drainage and a better control of your irrigation. The mix between peat and perlite, used in different ratios, ensures optimum aeration.

BM8 ENRICHED WITH COMPOST

With the addition of meticulously managed compost, this product line has an increased presence of beneficial microorganisms, which boosts plant growth. The composted sphagnum peat moss increases water retention, cation exchange capacity (CEC), and apparent density. The structure of the composted sphagnum peat moss also improves the water distribution throughout the mix.

ORIGINAL GROWER MIX PROFESSIONAL LINE

Specially formulated all purpose substrate for professional growers, using highly fibrous sphagnum peat moss that has pH adjusted using calcitic and dolomitic.

VPW PROFESSIONAL LINE

High porosity growing substrate specifically formulated using coarse perlite and vermiculite blended with canadian fibrous sphagnum peat moss, to provide excellent drainage and air to moisture ratios for optimal crop growth and health. The pH is adjusted using calcitic and dolomitic limestone, a starter fertilizer charge added and long-lasting wetting agent is incorporated, which promotes absorption of fertilizer and plant resistance to stress.

PERLITE, VERMICULITE & TURFACE

Perlite and vermiculite are used worldwide for soil aeration, water retention and drainage for both indoor and outdoor plant life. They also facilitate root penetration to maximize growth and help control temperature variations.

Lightweight and easy to handle, vermiculite is often used to cover seedbeds, providing protection while promoting more rapid and controlled germination.

As vermiculite can hold several times its weight in liquid, it is an efficient transportation vector, greatly facilitating the handling and spreading of water, fertilizers, pesticides and herbicides required for seedling development.

Turface MVP conditions soil to relieve compaction and manage moisture across sports fields. TURFACE can be incorporated into a new or existing field, or applied as a top dressing to improve the surface and reduce bad ball hops that can cause injury.

TERA-FILM 4 CLAIR .006

This polyethelene is very transparent and resistant, it provides excellent light diffusion. Also available in 55% opaque white for nurseries. Durable and long-lasting with a 4-year guarantee.

TERA-MAX AC-IR

An excellent film for the control of condensation. Possessing thermal properties, it results in the reduction of heating costs from 15 to 20% in winter. Durable and long-lasting with a 4-year guarantee.

Reduce your installation costs with the TERA-FILM tube roll.

When rolled out flat, there are two layers of superimposed polyethelene. This product reduces the installation time by allowing the positioning of two layers in only one step. Available in several widths. Ask your representative for more details.

Reduce your installation costs with the 2 layer tube polyethene.

When laid out flat, there are two layers of superimposed polyethelene, allowing quicker installation of the two layers in only one step. Available in both SUPER 4 and THERMAX in several widths: 10, 12, 20, 21, 24, 25 and 32 feet.

Ask your representative for more details.

SUPER 4 CLEAR 6-mil

This clear product has outstanding light transmission and is very resistant. Available as well in opaque white for nurseries.

THERMAX CLEAR AC 6-mil

This is an excellent film for condensation control. The outstanding thermal properties results in a 15 to 20% reduction of heating cost in winter. Very tough and durable.

LUMINANCE IR 6-mil

Lowers greenhouse temperatures by about 5 degrees in the hot season without affecting the light transmission. It also provides more comfortable working conditions. Produces stronger plants which require less watering. Recommended for garden centers, for the production of vegetables and open field high tunnels.

VISQUEEN CLEAR AC .0072

This product is recommended for the production of vegetables, it provides an excellent direct light and contains 20% more of condensation products. In winter, it can make save up to 20% on heating.

All our AT FILM polyethene are 100% guaranteed for a period of 4 years when installed in greenhouses, as recommended by the manufacturer.

Anti-Insect Nets

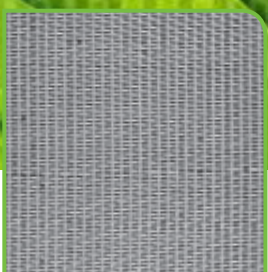

17 Mesh Net

25 Mesh Net

40 Mesh Net

50 Mesh Net

75 Mesh Net

Anti-insect nets block the penetration of insects and are differentiated by hole size (mesh = number of holes per inch). The type of net (mesh size) is selected according to the insect that is prevalent in the area.

HAF Basket Fan Series & High Velocity Basket Fans

Ideal Applications

- Exceptional air velocity and throw is ideal for cooling and heat de-stratification in greenhouses.
- Create a consistent air temperature in greenhouses.
- Insect control when creating a velocity of 300 feet per minute.
- Used to change the air in shipping trucks and containers when loading or unloading.
- Machine and compressor cooling.
